Summary

Software engineer who enjoys looking at the frontend from a backend engineer's perspective, focusing on performance, scalability, and optimizations to deliver seamless user experiences.

Technologies

Languages: TypeScript, Python, JavaScript, Java, C#, C, SQL, PHP, Bash

Web/Fullstack: Next.js, React, Astro.js, Angular, Vue.js, Express.js, Spring, Flask, FastAPI

Testing: Jasmin, Karma, Jest, Playwright

Databases: PostgreSQL, MySQL, MongoDB, Redis, MinIO, AWS RDS, S3

Data Eng & AI: Airflow, Airbyte, dbt, Kafka, Spark, LangChain, LangGraph, MLflow

Infrastructure & DevOps: Docker, Kubernetes, SonarQube, Nginx, Ansible, Vagrant, Jenkins, GitHub Actions, AWS

Experience

Software Engineering Intern, Talan – Tunis, TN

Feb 2025 – Aug 2025

- Integrated a multi-agent system with LangGraph for dynamic SQL and chart generation, enabling no-code data exploration.
- Built a Next.js frontend leveraging WebSockets to deliver instant feedback and live chart updates for a seamless user experience.
- Optimized frontend performance with persisted state to reduce network calls and enable offline viewing, and implemented optimistic updates for a faster, more responsive user experience.
 - Technologies used: Python, FastAPI, Next.js, LangGraph, LangChain, MLflow, MinIO, Airflow, Airbyte, dbt, PostgreSQL, Keycloak, Docker, Nginx

Freelance Job, Nexits – Paris, FR

Dec 2024 - Jan 2025

- Architected a CMS solution with Payload CMS and a custom block-based page builder, enabling no-code content updates for the landing site.
- Built an instantaneous preview system using Astro.js for dynamic component rendering with minimal JS.
- Designed a dual rendering strategy (SSR for preview, SSG for production), achieving 100 performance, 95 accessibility, and 100 SEO score on Lighthouse.
 - Technologies used: Astro.js, Payload CMS, Next.js, React, TypeScript, SQLite, Turborepo

Software engineer, Nexits – Paris, FR

Aug 2023 - Sep 2024

- Contributed to migration from legacy stack to Next.js, tRPC, and Turborepo monorepo with AWS deployment.
- Contributed to a frontend platform by building reusable components and a hybrid state management system with route-based state and Zustand, optimizing load times and UX.
 - Technologies used: Next.js, React, TypeScript, Node.js, tRPC, PostgreSQL, AWS (EC2, ECR, S3, RDS), Docker, GitHub Actions, Turborepo

Freelance instructor (Weekends), ENET'Com Junior Enterprise – Sfax, TN

Oct 2023 - Nov 2023

- Conducted workshops over the weekends on web development using the MERN stack (MongoDB, Express.js, React, Node.js) teaching more than 30 junior club members.

Software Engineering Intern, Nexits – Paris, FR

June 2023 - Aug 2023

Projects

- **Portfolio:** Built on Next.js with MDX-based content management, lazy loading, and server components. Integrated a LangChain agent that answers questions about me. Achieved 100 performance and best practices scores on Lighthouse.
- **EldSync:** Contributed to the frontend development of a Java microservices platform, building Angular components with Apollo Client and NgRx for state management, integrated with Spring Boot backend services.
- **OpsForge:** A self-contained local DevOps environment simulating production using Vagrant and Ansible. Includes a private Docker registry, Jenkins CI/CD, monitoring stack with Prometheus/Grafana, and SonarQube.
- **Playpex:** Torrent streamer in Node.js with backend wrapper using MSE API for seamless browser playback. Angular frontend, Electron desktop app to bundle the engine and the frontend, and Ionic mobile controller.

Education

Software engineering, ESPRIT

Sept 2022 – Sep 2025

Pre-engineering school, IPEIM

Sept 2020 – Juin 2022
